ure the size of age groups is undoubtedly most reliable when applied to estimates of aged populations. Aged persons are subject to higher mortality rates than younger people; in estimating the number of persons in the population, therefore, deaths provide a larger "sample" of aged than of younger persons. As a result, a chance variation of a few deaths among persons 65 years and over makes less difference in a population estimate than a like variation in the deaths of younger persons.

Care has been taken to make the estimates of aged population as accurate as possible. It is characteristic of these figures, however, as of most population estimates, that the smaller numbers and the extrapolated numbers are relatively less reliable than other figures. Thus, for any given year, the estimates for States with small numbers of aged persons tend to be less reliable than those for States with large aged populations. The estimates for 1947 and 1948, which represent extrapolations for years for which mortality data were not available, are less reliable than the estimates for 1940 through 1946.

Aged Beneficiaries of Old-Age and Survivors Insurance and the Aged Population

Twenty or more aged persons in every 100 living in Rhode Island and Connecticut in June 1948 were receiving benefits under old-age and survivors insurance. At the other extreme, fewer than 5 per 100 aged persons were on the benefit rolls in Mississippi, North Dakota, and South Dakota. This wide range in the beneficiary rate largely reflects State differences in the proportion of employment covered under the program.

Table 7 on page 30 presents State data on the number of aged beneficiaries whose benefits were in currentpayment status on June 30, 1947, and June 30, 1948, as well as on the relative number of such beneficiaries in the total aged population.

The aged insurance beneficiary rates, as well as the old-age assistance recipient rates that appeared in the October 1948 BULLETIN, are based on the estimates of aged population made by the Social Security Administration and described above.

Workers With Permanently Insured Status on January 1, 1949

An estimated 13.2 million workers had permanently insured status ¹ under old-age and survivors insurance on January 1, 1949, an increase of 1.9 million over the estimated 11.3 million permanently insured workers on January 1, 1948. These workers can, regardless of their future employment, qualify for primary benefits either when or after they reach age 65; in the event of their death, their survivors can qualify for monthly benefits or lump-sum death payments.

A distribution of this estimated total of 13.2 million workers according to the quarter-of-coverage requirement for permanently insured status—that is, the quarters of coverage necessary to be fully insured at age 65—is shown below:

Quarters of coverage required for per- manently insured status	Year of attainment of age 65	Workers perma- nently insured on Jan. 1, 1949 (in millions)
Total_		13. 2
40	After 1956 (program in opera- tion at least 20 years).	9. 2
6-39	Before 1957 (program in op- eration less than 20 years).	4.0
6-23	Before 1949	2.0
24-39	After 1948 but before 1957	2, 0

The number of permanently insured persons on January 1, 1949. classified by sex, age, and quarter-of-coverage requirement, was as follows:

Ace at birth-	Quarters of cover- age re- quired for per- manently insured status	Workers permanently insured on Jan. 1, 1949 (in millions)		
day in 1948		Total	Male	Female
Total	6~40	13. 2	10.8	2.4
Under 57 57-64 65 and over	40 24-39 6-23	9, 2 2, 0 1 2, 0	7.4 1.7 1.7	1, 8 0, 3 0, 3

¹ About 1,048,000 of these workers were in currentpayment status at the end of 1948.

¹The estimates are based on data through the calendar year 1946, derived from the 1-percent continuous work-history sample. At the beginning of 1949, slightly more than 1 out of every 3 fully insured workers was permanently insured. The effect of the more liberal requirement for permanently insured status at the older ages is illustrated in a comparison, by age, of the number of fully insured and permanently insured workers:

	Workers fully insured ¹ as of January 1, 1949 (number in millions)			
Age at birthday in 1948		Workers perma- nently insured		
	Total	Number	Percent of fully insured	
Total	38. 2	13. 2	35	
Under 57 57-64 65 and over	33.7 2.5 2.0	9.2 2.0 2.0	27 80 100	

¹ Not adjusted to reflect changes in insured status for (1) workers with combined earnings under coordinated survivor provisions of the old-age and survivors insurance and railroad retirement programs; and (2) veterans deemed to be fully insured only as a result of section 210 of title II of the Social Security Act, as amended in 1946.

As the program matures, the permanently insured group will constitute a growing proportion of the entire fully insured population. The progressive yearly growth of this group is indicated in the following tabulation:

	Workers fully insured at beginning of year (number in millions)					
Year		Workers permanently insured				
	Total	Total	With less than 40 quarters of cov- erage	With 40 quarters of cov- erage	Per- cent of fully in- sured	
1940 1941 1942 1943 1944 1945 1946 1947 1948 1949	$\begin{array}{c} 22.9\\ 24.2\\ 25.8\\ 28.1\\ 29.9\\ 31.9\\ 33.4\\ 35.2\\ 36.8\\ 38.2 \end{array}$	$\begin{array}{c} 0.\ 6\\ 1.\ 1\\ 1.\ 4\\ 2.\ 3\\ 2.\ 8\\ 3.\ 4\\ 8.\ 7\\ 11.\ 3\\ 13.\ 2\end{array}$	$\begin{array}{c} 0.\ 6\\ 1.\ 1\\ 1.\ 4\\ 2.\ 3\\ 2.\ 8\\ 3.\ 4\\ 3.\ 9\\ 3.\ 9\\ 4.\ 0\end{array}$	 4.8 7.4 9.2	$\begin{array}{c} 2.\ 6\\ 4.\ 5\\ 5.\ 4\\ 6.\ 4\\ 7.\ 7\\ 8.\ 8\\ 10.\ 2\\ 24.\ 7\\ 30.\ 7\\ 34.\ 6\end{array}$	

The sharp increase of more than 5 million in the number of permanently insured workers from the beginning of 1946 to 1947 is due to the fact that workers who will attain age 65 after 1956 could first acquire permanently insured status in the fourth quarter of 1946. In other words, they
